

A BIG WELCOME TO ALL OUR READERS

Export boom for Pickersgill-Kaye's products

It has been a very busy time since our last newsletter. Pickersgill-Kaye has exported specialist hose connector equipment to Meggitts' plant in China, while Korean companies Jiwon Tech and Rotem took delivery of train LED door status indicators and cab door locks, for passenger rolling stock destined for Irish Rail, respectively. Ocean Eagle Holdings Ltd in Hong Kong and Hitachi in Japan have also previously specified Pickersgill-Kaye products.

In addition following the successful launch of custodial locks for prisons, police stations and other detention facilities in the UK, the company has had interest from around the world - securing further orders from Ireland, as well as winning a first contract for its custodial locks from the Middle East, where they will be used in a new prison extension. Pickersgill-Kaye has also made inroads in France, with a further order from Locken for Kaye-Rota padlocks.

Meanwhile in North America, Pickersgill-Kaye products continue to be used on a number of new build applications with Axion Technologies (emergency talkback units for Toronto Transit tram cars), Julien (hammer boxes for tram applications) and Supersteel (loco cab door locks for EMD locos).

Many thanks

Peter Murphy
Managing Director

Pickersgill-Kaye launches HS MPL lock in a box

Pickersgill-Kaye is launching a lock-in-a-box package (for its High Security Multi-Point Locking) to simplify customer ordering and streamline production. This latest innovation will enable its customers, after they have answered a few simple questions such as whether the door opens inwards or outwards and hinging arrangements, to receive everything needed for lock installation in a single package.

Previously, customers were required to manually select each item needed, a time consuming process which, after listing door plates, lock cylinders, guards and handles, could run into several order lines with the added risk that one or more of the items could be wrong.
