Custodial Inspection Hatch

Model L8801

The Kaye Reduced Aperture Custodial Inspection Hatch – Model L8801 has a robust and reliable sliding cover mechanism which will fit most UK Police Cell Doors. The L8801 can easily be moved to three separate positions - closed for viewing, open for viewing and open for access.

The new internationally respected PKAYE / WTE Custodial Security Specification '03' a 'Specification for Custodial Inspection Hatches' has been drawn from the requirements of potential users and from the relevant parts of other hardware standards.

Designed and manufactured in Leeds, England, the hatch uses a lightweight alloy construction which is simple to operate. The slide mechanism will lock automatically and all edges are shaped to minimise injury.

The Kaye Custodial Inspection Hatch is designed to meet the requirements of the new standard and proven to withstand the specified static dead-load on any part of their inner surface without failure. It has long lasting operational durability and is resistant to wilful damage.
