

**Issued on behalf of Pickersgill-Kaye****Date: 21.04.11****Ref: PR29a HOSDB****PICKERSGILL-KAYE SHOWS IT HAS THE FULL RANGE
HOSDB Exhibition, 22nd- 24th March 2011. Farnborough, Hampshire. Stand No E31**

Following another year of remarkable product developments, Pickersgill-Kaye will be showing off its full portfolio of high security and custodial locking products on Stand E31 at the Home Office Scientific Development Branch (HOSDB) exhibition in March.

In addition to its proven range of Custodial Class 1 & 2 Locks and High Security Claw and Slide Bar Gate Locks, the Leeds based company will be further demonstrating the design quality and manufacturing strength for which it is renowned with the High Security Multipoint Locking (MPL) range.

Pickersgill-Kaye is now recognised as one of the UK's leaders in design engineering and manufacture for custodial and high security locking solutions and, through its growing product range, is able to offer a complete commercial package for new build and refurbishment projects across the UK and overseas.

All Pickersgill-Kaye products are designed on state-of-the-art CAD software, manufactured using high-tech production techniques and independently tested to a quality that exceeds international standards and guarantees a robust and integrated security solution.

Pride of place on the stand will be given to the High Security Multipoint range of locks, bolts and door fittings. Previously marketed through Adams Rite, these products were specifically developed by Pickersgill-Kaye to meet exacting standards of physical attack but maintain safe and easy exit when needed without compromising health and safety issues. Both surface and mortice mounted multi and single point locks are manufactured to the highest technical standards and aesthetically designed to complement the modern workplace.

Alongside the MPL range, Pickersgill-Kaye will be showcasing, on a fully fitted demonstration cell door, its range of high quality custodial solutions, which includes Class 1 Cell Locks, Class 1 & 2 Pass Locks and a range of two and three position cell door hatches and the, industry standard, Kaye-Rota padlock.

The Class 1 Cell Lock is constructed from a single billet of high quality solid steel. It is designed to provide safer cells, whilst also offering excellent levels of security and high resistance to damage or wear and tear.

Developed in co-operation with UK Government departments, the Pickersgill-Kaye Pass Locks are heavy duty locks with double sided key operation and have a unique functionality coupled with a robust reliability ideal for high security applications. The mortice-type lock can be installed in any security door (steel or wood) and features a solid steel main bolt fitted with 2 hardened roller inserts, a sacrificial brass escutcheon and a steel key cut to code.

Also on show will be a range of high security slide bar and claw gate locks for perimeter security applications. The Pickersgill-Kaye Gate Locks include an optional electronic activation which can be easily interfaced with existing access control systems for remote operation. The locks are fitted in a solid casing suitable for a variety of gate standards and have ingress protection against dust and moisture to increase defence against corrosion and provide a life-long reliability.

Looking forward to the HOSDB exhibition, Pickersgill-Kaye's Business Development Manager for Security and Engineering products, John Moore commented: "There is a move towards higher quality, more robust products - which is where our strengths lie. Our custodial and high security locks have already proven themselves at critical national infrastructure sites and police cells across the country and the addition of the MPL range gives us a complete offering that will be even more attractive to visitors at the event."

Background information:

Pickersgill-Kaye Ltd has built a solid reputation over the past 150 years through the specialist design and manufacture of Kaye's patent door locks for the architectural and railway industries throughout the UK and overseas. More recently, the company has diversified and is now using its expertise to design, supply & maintain high security locks for the UK detention and high security industries.

Operating from premises in Leeds, the company uses state of the art CAD systems linked to advanced CNC engineering facilities, producing high quality, British engineered products to the highest quality standards.
